Package Release

Unbabel for Service Cloud

Introduction

Unbabel is seamlessly integrated into Salesforce Service Cloud, delivering human-quality translations at speed.

In this document, we describe how you can update the Unbabel Apps for the latest versions.

Latest Packages

Latest package versions released.

Unbabel Connector

Installation URL

[your Salesforce Org URL]/packaging/installPackage.apexp?p0=04t1n000002Gujo

Unbabel for Service Cloud

Installation URL

[your Salesforce Org URL]/packaging/installPackage.apexp?p0=04t1v000002H0OsAAK
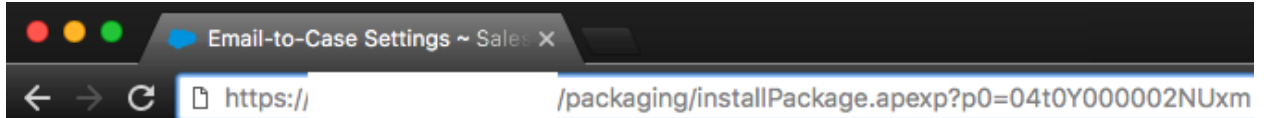

Steps

Please install the Apps by the correct order:

- **Unbabel Connector v1.58**
- **Unbabel Service Cloud v1.72**

For each package:

1. Copy the URL into a browser where you have already login into the target Salesforce Org. Press the "enter" key.

2. After that select "Install for Admin Only", or the option that best suits your organization needs and perform the necessary steps to update the managed package.

3. As the last step please save the configuration in order to remain with the previous values.

Release Notes

Fixed bug "List index out of bounds" when sending an email on the Email Translation tab

Fixes an exception that was thrown when attempting to send an email in the same language as the language defined in the related Case
